(Open to Relocate)

SUMMARY

Salesforce Developer with AI Expertise and Agentforce with 4+ years of experience building scalable enterprise solutions across **healthcare, insurtech, research, and nonprofit domains**. Proven track record of designing end-to-end **integrations**, automating business processes, and reducing development cycles through AI-powered tooling. Proficient in **Apex, LWC, Python**, and **multi-agent AI architectures**. Skilled in leading agile teams and delivering production-grade applications. Actively seeking opportunities to drive platform innovation at the intersection of Salesforce engineering

TECHNICAL SKILLS

- **Salesforce Platform:** Apex, Lightning Web Components, Flows, Service Cloud, Sales Cloud, Marketing Cloud, Experience Cloud, Agentforce, Agent Builder, Managed Packages
- **Programming Languages:** Python (Flask, LangChain, OpenAI SDK), Java, JavaScript (ES6+, React 18), SQL, SOQL/SOSL, HTML, CSS, XML, JSON
- **APIs & Integration:** REST API, SOAP API, MuleSoft, OAuth 2.0, JWT, Named Credentials, Platform Events, Webhooks, DocuSign, Azure AI APIs
- **DevOps & Tools:** VS Code, Git, GitHub, Bitbucket, Copado, Salesforce CLI, Data Loader, Workbench, JIRA, Confluence, Cursor AI
- **Cloud & Infrastructure:** AWS S3, Oracle Cloud, Redis, Salesforce Sandbox Management
- **AI & LLM:** Multi-Agent Architectures, Claude Sonnet, Prompt Engineering, MCP Tools, RAG Systems, FAISS, Agentic Workflows
- **Methodologies:** Agile, Scrum, DevOps, CI/CD, GDPR Compliance, UAT, Technical Documentation

PUBLICATIONS, CERTIFICATIONS, AWARDS

Papers published

- [Salesforce Certified Platform Developer I](#)
- [Salesforce Certified Administrator](#)
- [Salesforce AI Associate](#)

Associated with Aurigo

- Received recognition (x3) from the National Head for outstanding initiative, teamwork, and mentorship across project deliveries associated with Accenture

PROFESSIONAL EXPERIENCE

JerseyStem

Salesforce Developer

Remote, US

Sept 2025 - Present

Project 1: Donation Processing Pipeline — GiveWP to Salesforce Integration

Designed and delivered a scalable payment integration pipeline for a nonprofit, connecting GiveWP to Salesforce using event-driven architecture to automate and reliably process 500+ monthly donations.

- Led end-to-end integration using **webhooks, platform events, triggers, and staging objects**, **collaborating** with a senior architect and a 3-member frontend team to define data contracts, error handling strategies, and retry logic, ensuring zero data loss
- Architected a **staging object model** with a custom **JSON parser** in **Apex** to handle massive API response payloads, **ensuring zero data loss** and **accurate field mapping** through validation, deduplication, and transformation before final commit to Salesforce records

- Implemented a robust error logging and monitoring framework using custom objects and automated email alerts, enabling real-time visibility into failed transactions and **reducing issue resolution time by 50%**
- Developed detailed technical documentation covering webhook payloads, platform event schemas, trigger logic, and end-to-end data flow diagrams, **improving onboarding time for new developers by 40%**

Project 2: AI-Powered Content Pipeline using Salesforce

Architectural workflow automation to streamline the nonprofit's social media presence, replacing a manual content creation process with an end-to-end AI-driven pipeline from strategy to scheduling.

- Building a multi-step **AI agent** flow using **LangChain** to automate LinkedIn post generation, integrating content strategy, draft creation, review, and scheduling into a single orchestrated pipeline.
- Reduced content **turnaround time by 70% by eliminating manual handoffs** between strategy, copywriting, and approval stages, enabling a consistent weekly posting cadence.
- Designed modular agent architecture with distinct strategy, drafting, and review agents, allowing non-technical stakeholders to adjust content tone and targeting without developer intervention.

RENEGADE INSURANCE **Salesforce Developer**

Remote, US
May 2025 – Sept 2025

Project 1: Azure Analyze AI — Document Processing Integration

Integrated Azure Analyze AI-powered APIs into Salesforce to automate document processing, reducing submission errors and streamlining data capture for insurance workflows.

- Reduced proposal time by 70% by building a Salesforce integration with Azure Analyze AI-powered APIs using **Apex, JavaScript, XML, Visualforce pages, and OAuth 2.0** authentication for secure document processing.
- Built a wizard-based UI using custom **Lightning Web Components**, i.e., **HTML, CSS, and REST API** integrations, guiding users step-by-step through document submission and validation for a streamlined data capture experience.
- Validated data flow between Salesforce and external Azure services using **JSON payloads and REST callouts**, ensuring accurate extraction and mapping of document fields into Salesforce records.

Project 2: Sales Operations and Partner Experience Platform

Developed cross-cloud Salesforce solutions and AI-powered integrations to accelerate sales operations, improve data accuracy, and enhance the partner experience for a fast-growing insurtech startup.

- Improved policy **cross-selling by 25%** and **boosted lead conversion by 20% by developing automated workflows across Sales and Marketing Cloud**, including LWC flows for triggered notifications and personalized email campaigns.
- Built a Service Cloud agent using Agent Builder for quick case creation on partner site queries, **reducing manual case logging effort by 40%** and improving partner response time.

FORRESTER RESEARCH INC **Salesforce Developer**

Cambridge, MA
May 2024 – Aug 2025

Drove Salesforce platform enhancements and DevOps process improvements to streamline business workflows and accelerate deployment velocity for a leading global research and advisory firm

- **Accelerated deployment cycles by 30%** to production org by implementing **CI/CD DevOps pipelines** using **VS Code, Git, Bitbucket**, and **Copado**, ensuring seamless version control and release management
- Documented user stories and sprint deliverables in **JIRA**, maintaining a clean backlog and enabling transparent progress tracking across agile sprints
- Simplified a complex business process from 8 clicks to 3 by developing a custom LWC solution featuring header action filters, modal pop-ups, and inline editing using **ES6+, Apex**, and Lightning Message Service
- Built reusable **UI patterns** supporting Jest-based testability, improving component reliability, and reducing regression bugs across development cycles

- Created end-to-end **Salesforce** best practices and technical design documentation covering coding standards, naming conventions, and all **Salesforce Lightning Design System (SLDS)** components used, **improving team onboarding efficiency by 30%**
- Collaborated with senior developers and business analysts to translate functional requirements into scalable technical solutions, participating in code review sessions and knowledge transfer meetings
- Conducted thorough unit testing and **QA validation** for all deployed components, ensuring **90%+** code coverage and adherence to Salesforce governor limits

ACCENTURE

Salesforce Developer,

Client: Fortune 100 Healthcare Corporation (Pfizer)

Bangalore, India

Sept 2020 - Aug 2023

Delivered end-to-end Salesforce platform solutions and led agile development practices to streamline business operations, automate workflows, and drive enterprise-grade integrations for a Fortune 100 healthcare client

Project 1:Contract Negotiation Portal -- DocuSign and AWS S3 Integration

Built an automated contract execution pipeline for Pfizer's wholesaler negotiations, integrating Salesforce with DocuSign and AWS S3 to eliminate manual document routing and enable auto-signed contracts to reach the right parties without intervention

- Integrated **Salesforce** with **DocuSign via MuleSoft** middleware, routing signed contracts to **AWS S3** using **REST APIs** and **OAuth 2.0**, enabling wholesalers to close **30% more deals through streamlined offer letter generation**
- Ensured **GDPR** compliance by configuring data retention policies, consent management workflows, field-level encryption, and data masking strategies for sensitive patient and client records
- Debugged and **resolved 25 production bugs** using Debug Logs and root cause analysis, reducing support tickets by **40%** through optimized **Apex Triggers, Async Apex**, and **Batch Apex** for large-scale data loads
- Attained **95%+** code coverage by writing comprehensive **Apex unit test scripts**, optimizing test data factories, and performing reliable **regression testing** across all deployed components
- Maintained technical documentation covering trigger logic, integration specs, data models, and deployment runbooks, enabling smooth knowledge transfer across team rotations

Project 2:Approver Reassignment -- Out-of-Office Delegation Tool

Developed a self-service LWC tool that allowed approvers to delegate approval authority when out of office, replacing a manual ticketing process that was generating high volumes of reassignment requests and slowing deal velocity

- Built a custom LWC interface with an OOO toggle, delegated approver dropdown populated from the org hierarchy, and a one-click assign action, reducing approver reassignment tickets by **60%** and eliminating multi-day approval bottlenecks
- Developed **backend Apex logic** to programmatically query all active approval processes assigned to the outgoing approver and dynamically reassign them to the selected delegate, cutting manual admin effort by **80%**
- Collaborated with business analysts and QA teams to define acceptance criteria, conduct regression testing, and validate reassignment accuracy across all approval process types

Project 3:Platform Operations and Agile Delivery

Led agile ceremonies and platform-wide enhancements across both project tracks, driving sprint execution, data migrations, and operational efficiency improvements for the broader Salesforce org

- Led a team of 5 developers, executing 8 data migrations using **change sets**, collaborating with cross-functional teams for code reviews, **UAT**, and end-user sign-off
- As **Scrum Master**, gathered business requirements, created user stories, and facilitated retrospectives, driving a **20% increase** in **agile** team velocity across sprint cycles
- Deployed 12 code and configuration releases to production using Copado and **JIRA**, ensuring zero-downtime deployments and adherence to change management protocols
- Delivered 100+ hours of annual time savings by implementing Flows, Process Builder, custom permission sets, validation rules, sharing rules, and managed packages for streamlined license management

- Elevated data quality using Schema Builder, **SOQL/SOSL** queries, and **ETL tools** like Workbench and Data Loader, writing Apex Classes with subqueries, and achieving a **30%** error reduction

PROJECTS

ZEUS AI - MULTI-AGENT AI ARCHITECTURE & CODE GENERATION

- Architected a **5-agent AI** pipeline using Claude Sonnet 4 with an intelligent validation-fix loop that generates production-ready Salesforce code in under 5 minutes, validates against live orgs via Salesforce CLI, and auto-corrects errors using dependency-aware ordering, achieving 96% time reduction vs traditional 80-100 hour development cycles
- Deployed production application using **React 18**, Flask, and **Oracle Cloud** with Salesforce **CLI/JWT authentication** for headless org validation, reducing infrastructure costs to \$5-10/month while maintaining enterprise-grade functionality
- Built a pattern-based code generation system with **7 MCP tools** for org-aware context, ensuring generated code integrates seamlessly with existing metadata and dependencies

HIGH-CONCURRENCY LLM-BASED BACKEND SYSTEM

- Implemented a scalable Python backend integrating **LLMs, SQL**, and Redis to support 15,000+ concurrent requests
- Designed asynchronous request handling and caching layer using **Redis** to optimize response times and reduce redundant **LLM** calls, ensuring low-latency performance under heavy load
- Built **RESTful API endpoints** with robust error handling, rate limiting, and logging to support production-grade traffic patterns

SALESFORCE WORKFLOW ORCHESTRATION MANAGED PACKAGE

- Developing a managed package for workflow orchestration, enabling admins and developers to design, automate, and monitor complex multi-step business processes directly within Salesforce
- Building a configurable workflow engine using custom objects, Apex triggers, and Flow orchestration to support conditional branching, parallel execution, and approval routing out of the box
- Designing a package architecture with namespace isolation, custom metadata types, and permission set groups to ensure seamless installation and upgrade paths across subscriber orgs

EDUCATION

NORTHEASTERN UNIVERSITY

MS in Information Systems (GPA: 3.6)

Boston, MA

Aug 2023 - May 2025

SRM UNIVERSITY

Bachelor of Technology

Chennai, India

June 2016 - May 2020
